### Installing and Configuring Spybot - Search & Destroy

1. Open a web browser – either Explorer or Firefox.
2. Go to [www.downloads.com](http://www.downloads.com)
3. In the web site search box type Spybot and press Enter.
4. Scroll down the screen until you find Spybot - Search & Destroy 1.6.2. (This is the newest version as of 12/09.)
5. Click **download now**. If you are using Explorer there may be a message stripe at the top of the screen that says *this download is blocked*. Click on the message and tell it to download anyway.
6. Choose download file.
7. The next box asks if you want to save the file.
8. Choose Save and save the file onto the desktop. \*\*Some versions of Firefox will place the file in My Documents/Downloads. If it's not on the desktop look there.
9. Wait for download to finish - then close your browser
10. Locate the Spybot icon on your desktop and double click on it.
11. Click Run, then click on *Next* in the Language (English) box
12. Choose 'I accept the agreement' and click on *Next*.
13. The next box is the default location for the program. This is fine so choose *Next*.
14. The next screen is 'Full installation' with check marks in check boxes. Don't modify anything and choose *Next*.
15. Click *Next* again.
16. Select additional tasks – check all the boxes and click *Next*.
17. Click *Install*
18. Wait for the installation to finish. When the completion screen comes up, uncheck both check boxes and click *Finish*.
19. There should now be two Spybot icons on your desktop. One is the icon from the file you downloaded and the other is the program icon. Right click on the file you downloaded (Spybotsd.exe) and delete it.

## Starting Spybot - Search & Destroy for the First Time

Find the Spybot program icon on your desktop and double-click on it. When you use Spybot - S&D for the first time, it will prompt you for certain tasks to complete. You should complete all tasks as described below.

1. Legal stuff – Put a check mark in the box, and then click *OK*.
2. Registry backup – Click *Next* at the bottom to skip this step.
3. Search for updates – Click *Next* at the bottom to skip this step.
4. Immunize the system – Click *Next* at the bottom to skip this step.
5. Step 7 of 7 – Click on *Start using the program*

Spybot will finish starting and should look like this:

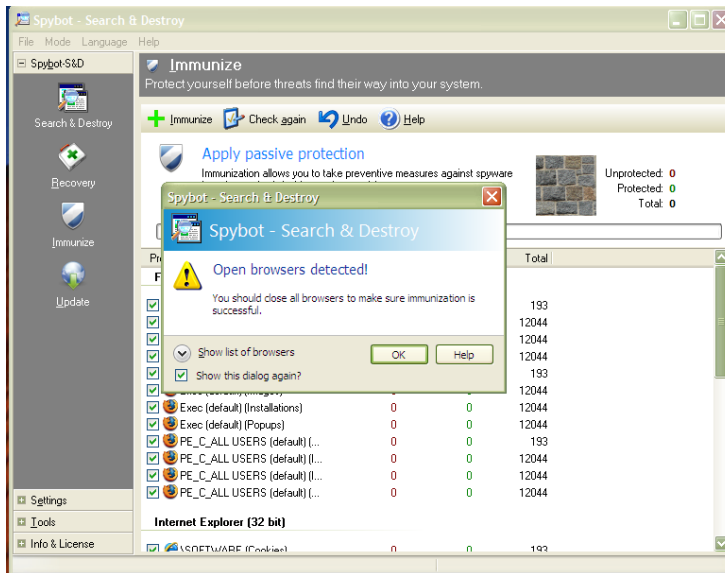

## Updates, Immunization and Scanning

### Updates

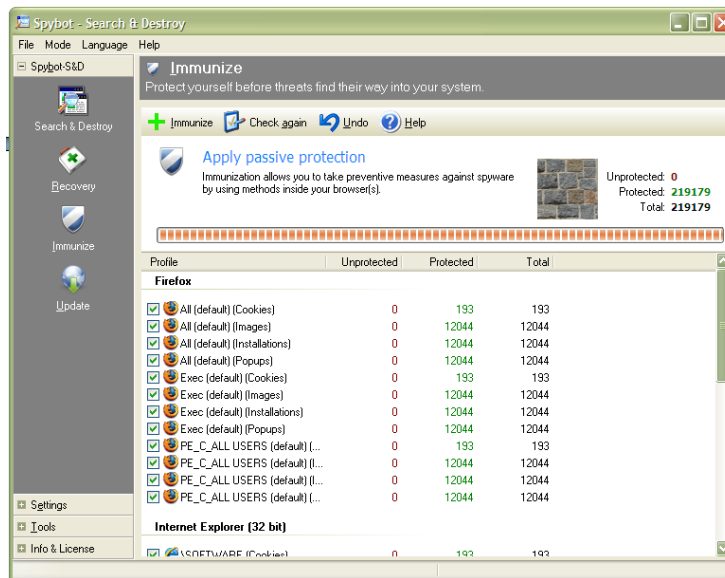

1. Click on **Update** in the left hand column. The next screen will give you many download locations
2. Scroll down the list until you find “TDS (USA)”. This is not our TDS but it will be an easy one to look for!
3. Click *Continue*.
4. On the updater screen there will be files to update that are checked and also optional files. Check all the boxes and click *download*.
5. After the updates are downloaded, another legal stuff message may come up. Put a check in check box for “Don’t show this message again” and click *OK*.

### Immunize

1. Click on the *Immunize* shield on the left hand side. The Immunization module will then open and scan for new threats. You will need to close both Firefox and Explorer before using this feature, or it will not apply the protections (see below)

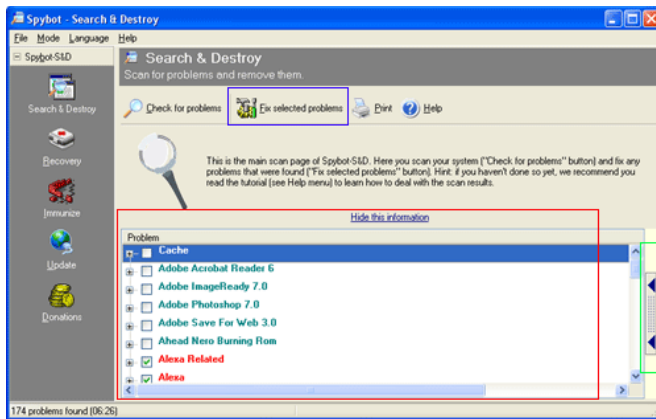

2. When the scan is complete, click on the **green plus sign** to run the immunization process.
3. When it's finished there should be **0** unprotected files.

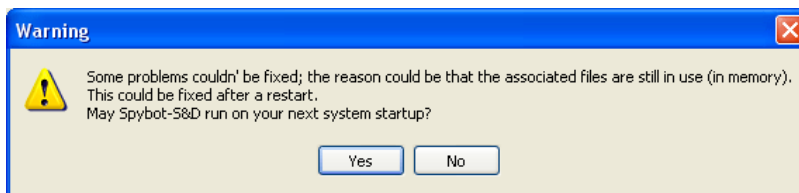

### Scanning for Infections

1. Click on the icon at the top of the list that says "Search & Destroy".
2. A message will come up asking if you want Spybot to clean temporary files. Say yes and wait until it finishes.
3. Click on "Check for problems" at the top of the screen and wait until it is finished. This step will take some time. Spybot - S&D will automatically mark any malware it finds.
4. Click on the button labeled Fix selected Problems.

5. If Spybot has trouble removing any spyware, because that particular spyware is running memory you will see a screen like that below asking if it would be ok to run Spybot - S&D on the next reboot before any other applications start running.

6. Click **Yes**. Then close Spybot and restart Windows; Spybot will run automatically and fix any of the programs it could not fix previously.
7. At this point you will be presented with the list of found entries again, but now there will be large green checkmarks next to the items that Spybot - S&D was able to remove. The ones that are still checked but do not have the large green checkmark next to them will be fixed on the next reboot of windows.
8. Once it's done you can close Spybot.
